This changes a few things:

1. "built-in" contrib extensions are no longer auto-loaded. They must be:
   - ○ allowed the same as other extensions (via `-e` , `LOOKATME_EXTS` env var, or answering the prompts)
   - ○ declared the same as other extensions (in the markdown YAML)
2. Adds a soft-requirement for a `user_warnings` function to exist in all extensions.
   - ○ This is how extensions should declare any security warnings or considerations for users
   - ○ If this function is not defined in the contrib module, a warning is added to inform the user
3. Adds new command-line arguments:
   - ○ `-i` - ignore load failures during extension loading
   - ○ `--safe` - Do not load any new extensions specified by the source markdown. Extensions manually approved via `-e` or `LOOKATME_EXTS` env var are still loaded
   - ○ `--no-ext-warn` - Turns off all warnings about loading new extensions that are specified in the source markdown

Examples of this in action:

🔀 **d0c-s4vage** added 2 commits 2 years ago

-○- 👤 `Added warnings and more robust extension handling`   ✓ e8253bb

-○- 👤 `Updated tour gif`   ✗ dc5a99b

fixes #109

d0c-s4vage commented on Oct 23, 2020   Owner   Author

@randomstuff I think this should cover the concerns about making the user aware of what might happen if they render markdown from unknown sources and certain extensions are used.

(Sorry, I forgot to answer). Yes, I was not expected that much changes but this looks good to me. Thanks.
