SUMMARY BY ROCKET.CHAT

Dear Rocket.Chat Team

While inspecting our logs I noticed, that the OAuth Tokens are leaked in plaintext in the logs. I wanted to draw your attention to this, as this is a security vulnerability. See the attached Screenshot for a redacted log excerpt.

In my opinion, the best approach here would be to substitute all tokens for a placeholder.

Server and Version:

(We are running Rocket.Chat in a Docker Container)

```
+---------------------------------------------------------+
| SERVER RUNNING |
+---------------------------------------------------------+
| |
| Rocket.Chat Version: 4.1.0 |
| NodeJS Version: 12.22.1 - x64 |
| MongoDB Version: 4.2.17 |
| MongoDB Engine: wiredTiger |
| Platform: linux |
| Process Port: 3000 |
| |
| ReplicaSet OpLog: Enabled |
| Commit Hash: 0da143cd13 |
| Commit Branch: HEAD |
| |
+---------------------------------------------------------+
```

Impact

4.6.4>
