RailsAdmin

gem `v3.1.1` build `https://github.com/badges/shields/issues/8671` coverage `96%` ⚙ maintainability `B` SemVer

RailsAdmin is a Rails engine that provides an easy-to-use interface for managing your data.

Getting started

- Check out the docs.
- Try the live demo. (Source code)

Features

- CRUD any data with ease
- Custom actions
- Automatic form validation
- Search and filtering
- Export data to CSV/JSON/XML
- Authentication (via Devise or other)
- Authorization (via CanCanCan or Pundit)
- User action history (via PaperTrail)
- Supported ORMs
  - ActiveRecord
  - Mongoid

Installation

1. On your gemfile: `gem 'rails_admin', '~> 3.0'`
2. Run `bundle install`
3. Run `rails g rails_admin:install`
4. Provide a namespace for the routes when asked
5. Start a server `rails s` and administer your data at /admin. (if you chose default namespace: /admin)

Upgrading from 2.x

Due to introduction of Webpack/Webpacker support, some additional dependency and configuration will be needed. Running `rails g rails_admin:install` will suggest you some required changes, based on current setup of your app.

Configuration

Global

In `config/initializers/rails_admin.rb`:

Details

To begin with, you may be interested in setting up Devise, CanCanCan or Papertrail!

Per model

```
class Ball < ActiveRecord::Base
  validates :name, presence: true
  belongs_to :player

  rails_admin do
    configure :player do
      label 'Owner of this ball: '
    end
  end
end
```

Details: Models, Groups, Fields

Support

If you have a question, please check this README, the wiki, and the list of known issues.

If you still have a question, you can ask the official RailsAdmin mailing list.

If you think you found a bug in RailsAdmin, you can submit an issue.

Supported Ruby Versions

This library aims to support and is tested against the following Ruby implementations:

- Ruby 2.6
- Ruby 2.7
- Ruby 3.0
- JRuby
